No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The sequence may be expressed in e.g. COS-7 cells. The encoded protein, its ligands or fragments, and antibodies may be used for the treatment of transplant rejection, graft-versus-host disease, autoimmune disease, etc.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ACT-4-L-h-1 is a specific binding partner (sbp) to the ACT-4 receptor polypeptide (encoded by this sequence) on the surface of activated CD4 positive B cells. The sbp and its fragments are useful in pharmaceutical compositions to modify a patient's immune response as well as having application in the treatment of transplant rejection, graft versus host disease, autoimmune disease, inflammation, infectious agents, HTLV infected cells or HTV. Specifically the sbd can be used to treat inflammatory bowel disease. The sbd can also be used for screening for immunomodulatory agents able to recognise ACT-4 and for monitoring activated CD4 resistive resistive activated CD4 and for monitoring activated CD4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Disclosure;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      899
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           840
```

Antigen OX-40 is specifically expressed on the cell surface of antigen activated T-cells, especially, for example, CD4+ T-cells. I human CDNA encoding the human OX-40 homologue was cloned as follows Using the Experimental Autoimmune Encephalomyelitis model in rats the OX-40 antigen was identified (expressed on the surface of activated autoantigen-specific CD4+ T-cells present at the site of inflammation but absent on CD4+ T-cells at non-inflammatory sites) and cDNA encoding the antigen was isolated. PCR primers were designed and used to clone murine OX-40 cDNA by PCR from RNA isolated from murine CD4+ T-cells activated with concanavalin A.

face of + T-cells. A d as follows.

The published patent application states that the OX-40 cDNA sequence is also in SQ ID no. 1, but this sequence is not present in the spec. A nucleic acid having the sequence in SQ ID no 1 and the polypeptide encoded by it are claimed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence

                                                                                                                                                                                                                                                                                 This plasmid encodes an OX40/Fc antibody fragment mutein protein, and is used to express a soluble OX40/Fc mutein fusion protein for use in detecting cDNA clones encoding a OX40 ligand. The Fc fragment may be derived from human IgG1, and the plasmid may be used to transform the CV-1/EBNA (ATCC CRL 104/8) monkey kidney celline. Culture supernatant was purified by affinity chromatography and this was used, together with labeled goat anti-human IgG to screen various cell lines.

The fusion protein was used for detecting cDNA clones encoding an OX40 ligand. The invention claims for a murine OX40-L cytokine (AAW48975) that binds to the murine T cell antigen, OX40. The OX40-L protein is claimed to be useful for co-stimulation of T-cell production and in binding assays for detecting OX40 or its homologues. The OX40-L protein is also claimed to generate a TH-2 immune response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Purified polypeptide OX-40 ligands - for co:stimulation production and binding assays for OX-40 and homologues
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Baum

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ş
                           The present sequence represents the mouse OX40 extracellular domain encoding cDNA. The extracellular domain of OX40 is its ligand binding domain. The present cDNA was used in the construction of the chimeric OX40/Fc cDNA (AAV32640). The invention claims for a murine OX40-L cytokine (AAW48975) that binds to the OX40 murine T cell antigen. The OX40-L protein is claimed to be useful for co-stimulation of T-cell production and in binding assays for detecting OX40 or its homologues. The OX40-L protein is also claimed to generate a TH-2
                                                                                                                                                                                                                                                                                                                                                                                          Key

The invention relates to a nucleic acid comprising a sequence of 18 CC bases, of a segment of chemically pretreated MNA (CP DNA) e.g. with CC bisulphite, of genes associated with tumour suppression and CC oncogenes having a sequence taken from 536 (actually 533 since CC numbers 408, 458 and 500 are missing from the sequence listing) sequences CC (Ss) and sequences complementary to (Ss). The nucleic acid may be a CC peptide nucleic acid-oligomer (PNA) of at least 9 nucleotides and may CC form part of a set of probes for detecting the cytosine methylation state CC and/or single nucleotide polymorphisms and also to be used in an CC array for analysing diseases associated with CpG dinucleotides e.g. CC cancers and tumours. The probes can also be used in a method for CC angore therapy of existing diseases or the predisposition to specific CC diseases, by analysing cytosine methylations. The parameters may be CC compared to another set of genetic and/or epigenetic parameters, the CC differences serving as basis for diagnosis and/or prognosis events which CC are disadvantageous to patients. The present sequence is one of the CC complementary sequences derived from tumour suppressor genes and CC complementary sequence with even numbered Seq ID numbers are the CC complementary sequence with even numbered Seq ID numbered sequence (e.g. Implementary sequence of the corresponding odd numbered sequence (e.g. Implementary sequence of the corresponding odd numbered sequence (e.g. Implementary sequence of the corresponding odd numbered sequence (e.g. Implementary sequence of the corresponding odd numbered sequence (e.g. Implementary sequence of the corresponding odd numbered sequence (e.g. Implementary sequence of the corresponding odd numbered sequence (e.g. Implementary sequence of the corresponding odd numbered sequence (e.g. Implementary sequence (e.g. Imple
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Fragments of chemically modified genes associated with tumour suppressor genes and oncogenes, useful in designing primers and probes for analysing diseases associated with cytosine methylation state e.g. cancer

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      secondary signalling sequences. The specification describes stimulatory primary signalling motifs. Primary motifs are efficient at at mediating immune cell signal transduction, particularly when incorporated in an intracellular signalling domain of a chimeric receptor. The primary signalling motif can be combined in any way so as to achieve the desired level of activation (or inhibition) of a number of secondary messenger cascades. The signalling motifs are useful in therapy and in the manufacture of medicament for treating or preventing disease in humans or animals. They are are useful for treating human patients suffering from infectious diseases e.g. human immunodeficiency virus (HIV) infections, inflammatory/autoimmune diseases such as asthma and eczema, congenital diseases e.g. cystic fibrosis, sickle cell anemia dermatological diseases e.g. secondaries neurological

                                                                                                                                                                                                        The invention relates to a novel nucleic acid encoding an adaptor CC receptor protein comprising an extracellular ligand-binding domain, a CC transmembrane domain and an intracellular signalling domain. The CC intracellular signalling domain comprises the cytoplasmic portion of at least one adaptor protein, and the extracellular ligand-binding domain CC is not CD8 or a major histocompatibility complex (MHC) class I protein. CC The adaptor receptor protein and the nucleic acid encoding it are useful in therapy. They are useful in the manufacture of a medicament for the CC treatment or prevention of diseases in humans and animals. They are useful in the treatment of infectious diseases (e.g. HIV infection), CC distance of an autolimnune diseases (e.g. HIV infection), CC dermatological diseases (e.g. cystic fibrosis and sickle cell anaemia), CC dermatological diseases (e.g. psoriasis), neurological diseases (e.g.) compenital diseases (e.g. psoriasis), neurological diseases (e.g.) compenity and metabolic/idiopathic diseases such as diabetes and cancer. The present sequence is one of a large number of oligonucleotides used in the construction of sequence blocks (SBs) of primary and secondary signalling motifs transduce either a cc stimulatory or an inhibitory signal, which regulates primary activation of the present receptor (TCR) complex. Secondary signalling motifs impart conditions of the disparet receptor receptor in the present and secondary signalling motifs may be used as

                                                                                                                                                                                          mediating immune cell signal transduction, particularly when incorporated in an intracellular signalling domain of a chimeric receptor. The primary signalling motif can be combined in any way so as to achieve the desired level of activation (or inhibition) of a number of secondary messenger cascades. The signalling motifs are useful in therapy and in the manufacture of medicament for treating or preventing disease in humans or animals. They are are useful for treating human patients suffering from infectious diseases e.g. human immunodeficiency virus (HIV) infections, inflammatory/autoimmune diseases such as a constant of the cons
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      multiple sclerosis; transplant-related disease; metabo organ transplant rejection; graft versus host disease;

                                                                                                                                                                                                              these primary signalling motifs are useful in medicine and research. They are useful in therapy, or in the manufacture of a medicament for treating or preventing disease in humans or in animals. These diseases include infections (e.g. HIV (human immunodeficiency virus) infection), inflammatory or autoimmune diseases (e.g. asthma or eczema), congenital diseases (e.g. eystic fibrosis or sickle cell anaemia), dermatological diseases (e.g. psoriasis), neurological diseases (e.g. multiple sclerosis), organ transplant rejection or graft-versus-host disease, or metabolic/idiopathic diseases (e.g. diabetes or cancer). The present sequence is one of a large number of oligonucleotides used in the construction of sequence blocks (SBs) of primary and secondary
                                                                                          signalling motifs. Primary signalling motifs are sequences that transduce either a stimulatory or an inhibitory signal, which regulates primary activation of the T cell receptor (TCR) complex. Secondary motifs impart secondary or co-stimulatory signalling capacity to a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to novel primary signalling motifs containing a consensus amino acid segue. These motifs are extremely efficient at mediating immune cell signal transduction, particularly when incorporated into an intracellular signalling domain of a chimeric receptor. Nucleic solds that encode, and polypeptides that contain, the process of the contain of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New nucleic acids encoding polypeptides with expanded primary signaling motifs, for use in gene therapy, particularly for treating or preventing infections, inflammations or autoimmune diseases in humans
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI; 2001-328791/34.

The invention relates to a novel nucleic acid encoding an adaptor receptor protein comprising an extracellular ligand-binding domain, a CC transmembrane domain and an intracellular signalling domain. The intracellular signalling domain and the extracellular ligand-binding domain. The cleast one adaptor protein, and the extracellular ligand-binding domain is not CDB or a major histocompatibility complex (MHC) class I protein. The adaptor receptor protein and the nucleic acid encoding it are useful in therapy. They are useful in the manufacture of a medicament for the treatment or prevention of disease in humans and animals. They are useful in the treatment or prevention of diseases (e.g. HIV infection), inflammatory and autoimmune diseases (e.g. asthma and eczema), compenital diseases (e.g. cystic fibrosis and sickle cell anaemia), compenital diseases (e.g. psoriasis), neurological diseases (e.g. cystic fibrosis and sickle cell anaemia), compenital diseases (e.g. psoriasis), neurological diseases (e.g. cystic fibrosis and sickle cell anaemia), compenital diseases (e.g. psoriasis), neurological diseases (e.g. cystic fibrosis and sickle cell anaemia), compenital diseases (e.g. asthma and eczema).

CC disease and metabolic/idiopathic diseases such as diabetes and cancer. The present sequence is one of a large number of oligonucleotides used in the construction of sequence blocks (SBs) of primary and secondary signalling motifs transduce either a stimulatory or an inhibitory signal, which regulates primary activation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel polynucleotide encoding adaptor receptor protein useful for treating human immunodeficiency virus (HIV) infection, asthma, cystic fibrosis, multiple sclerosis, organ transplant rejection, diabetes and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 01-NOV-1999;

                                                                                                                                                                                                                                                                                                                                                                     genes and analysing
                  The invention relates to a nucleic acid comprising a sequence of 18 bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with bisulphite, of genes associated with tumour suppression and oncogenes having a sequence taken from 536 (actually 533 since numbers 408, 458 and 500 are missing from the sequence listing) sequences, and sequences complementary to (Ss). The nucleic acid may be a peptide nucleic acid-oligomer (PNA) of at least 9 nucleotides and may form part of a set of probes for detecting the cytosine methylation and/or single nucleotide polymorphisms and also to be used in an array for analysing diseases associated with CpG dinucleotides e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               of the T cell receptor (TCR) complex. Secondary signalling motifs impart secondary or co-stimulatory signalling capacity to a molecule in T cells. Primary and secondary signalling motifs may be used as components of the adaptor receptor protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     01ek
